

LEVANTA INTREPID M

The World's First Linux Management Appliance

Frustrated with your Linux infrastructure and how to manage it? Levanta can help you to reclaim lost time. Grow your Linux farm & reduce IT burdens, with technology that speeds system deployment, change control & Linux system management.

THE INTREPID M TAKES LEVANTA'S PROVEN LINUX MANAGEMENT TECHNOLOGY TO THE NEXT LEVEL

Levanta Intrepid M is the world's first Linux management appliance. It combines Levanta's Linux management application with powerful processing capability, shared storage, network connectivity, and open source software, for greater functionality, flexibility and faster deployment.

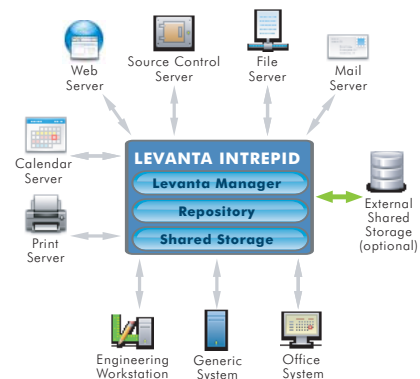

Intrepid M's turn-key solution plugs right into your network, eliminating tedious installation and setup. Levanta Intrepid M allows you to benefit from the advanced functionality already realized by fortune 500 companies across the nation.

- **Fast and Portable:** Provision servers or workstations anywhere, anytime and in minutes. Migrate applications, processors, and platforms quickly.
- **Flexible:** Supports commodity hardware, blades, virtual machines, and mainframes.
- **Out-of-the-Box capabilities:** Prepackaged with Fedora™ Linux and other open source applications supporting common server personalities.
- **Total control:** Track any changes, down to the byte-level, and undo them at will.
- **Effective Disaster Recovery:** Bring machines back to life quickly.

JUST PLUG IT IN & HAVE FULL CONTROL OF YOUR LINUX ENVIRONMENT IN LESS THAN AN HOUR

The Intrepid M not only reduces time in managing Linux environments, but makes setting up complex management less costly and more efficient. It eliminates the need to purchase system hardware and storage and reduces installation time.

Connect the Intrepid to your network, power it on, set up the IP address, and immediately discover unmanaged hardware and deploy Linux to them. You can implement common services easily, without expertise. Simply click, drag, drop and start all your critical business services quickly and efficiently, deploying your entire Linux environment in about one hour.

ELIMINATE COMPLEXITY IN MANAGING LINUX DEPLOYMENT, MIGRATION & RECOVERY

Whether your organization has a few servers or a network of hundreds, whether you are deploying new hardware or software, or you just want to implement a planned migration, the Intrepid M appliance can speed completion, reduce complexity and minimize IT costs.

Levanta Intrepid M: The World's First Linux Management Appliance

GAIN POWER OVER YOUR SOFTWARE AND HARDWARE FOR OPTIMUM USABILITY

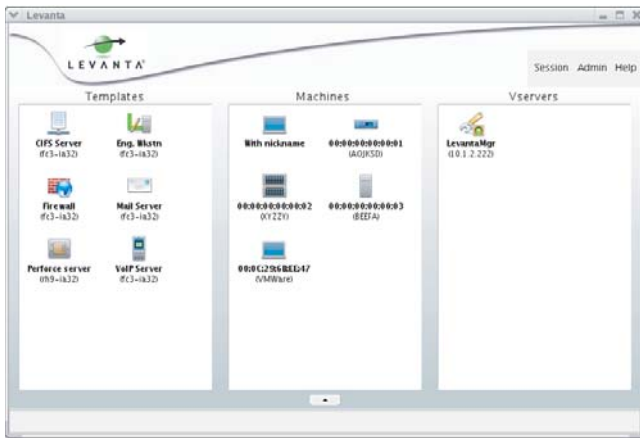

The Intrepid maximizes use of assets and sharing of resources while distributing applications more efficiently. It provides servers with access to needed software applications from shared storage. Servers run virtual instances of applications without the need for specific hardware types or local installations of software applications; allowing you to quickly deploy software, install an OS and leverage your current investments.

THE MOST ADVANCED LINUX ADMINISTRATIVE APPLIANCE ON THE MARKET TODAY

The Intrepid uses state-based transaction management to turn administrative tasks into discrete transitions between states. Personality templates are used to define the base-level state and configuration of the system deployed. Overlays capture any changes that occur over time. Roll-back or roll-forward between states, or dynamically define new configurations of hardware or software quickly and easily.

NO SCRIPTING, COPYING OF FILES OR MANUAL SYSTEM CONFIGURATION

The Intrepid automatically deploys the OS, software and file systems based on pre-defined templates. Using pre-defined or custom templates you establish the configuration of the server. The Intrepid manages virtual servers network-booted from shared storage repositories, eliminating scripting or file copying.

ABOUT LEVANTA, INC.

Levanta is a leader in Linux management and data virtualization. Levanta's unique technology marries change control with data virtualization, delivering dramatically faster and more flexible control of Linux on commodity hardware, racks, blades, boxes, virtual machines, and even mainframes. Levanta's customers include industry leaders in financial services, entertainment, government, retail and telecommunications. Levanta has partnerships with IBM, HP, Novell, and Red Hat. A private company, Levanta can be found on the Web at www.levanta.com.

Benefits

Provision: Servers or workstations from bare metal with full Linux stack and applications in just minutes.

Deploy: Software and patches simply and quickly to multiple machines without lengthy installation steps or copying files.

Migrate: Move all the software and the entire OS on a machine from one piece of hardware to another.

Be On-Demand: Deploy new servers and change existing services quickly and in minutes upon demand.

Track Everything: Track all changes made to a machine by any means, supporting your testing, security, or compliance needs.

Instant Rollback: Undo changes made to a machine at any point in time, in minutes.

Out of the Box: Includes pre-defined templates and open source software for servers and workstations. Or create your own.

Features

- Intuitive Java-based UI with integrated CLI
- 10 pre-defined personality templates
- Role-based secured access
- Automatic change tracking
- File system rollback
- Automatic asset discovery
- Remote server operations

Software Supported

- Linux Distros: Fedora installed, RedHat and SuSe
- Web server: Apache installed
- Print and file server: Samba installed
- Source control server: CVS installed and Perforce
- Mail server: Qmail

Hardware Specifications

- 2U, 19" rack mountable
- Six hot swap SATA hard drives (2 disks reserved for system use)
- 1.2 TB storage
- Integrated RAID controller supporting RAID-5 storage
- Two 10/100/1000 Ethernet ports
- Full-color LCD screen
- Redundant hot swap power supplies
